

GOVERNMENT OF MAHARASHTRA

**TADOBA-ANDHARI TIGER RESERVE,
CHANDRAPUR**

TIGER CONSERVATION PLAN
(Plan Period 2016-17 to 2025-26)

VOLUME-III
(ADJOINING AREA)

Basic Plan by
Dr. S.H. Patil, IFS
Conservator of Forests & Field Director,
Tadoba-Andhari Tiger Reserve,
Chandrapur

Revised Plan by
Shri. V.R. Tiwari, IFS Shri. G.P. Garad, IFS
Chief Conservator of Forests & Field Director,
Tadoba-Andhari Tiger Reserve,
Chandrapur

INDEX

PART A: THE EXISTING SITUATION

CHAPTER 1

INTRODUCTION OF THE AREA

1.1 Brief Description of the Area and significance for Tiger Conservation:

1.1.1 Name:

The area included as adjoining area comprised of Bramhapuri Forest Division, Central Chandra Forest Division, Chandrapur Forest Division, West Chanda FDCM Division, Central Chanda FDCM Division and Bramhapuri FDCM Division. Commonly this tract can be named Chandrapur district adjoining forest. The forest areas are both in compact block and scattered patches covering total geographical area of Chandrapur district (except Core and Buffer of TATR).

This area is unique and prime habitat for the flora and fauna including the Tiger, Panther, along with herbivores like Chitals, Sambars, Gaur, etc.

1.1.2 Location:

By Geographic Co-ordination:-

- i) Longitude 78° 48', and 80° 55' East.
- ii) Latitude 19° 30' and 20° 45' North

Location by Other Features:-

The area is situated in the South East of Maharashtra State. On the North of Chandrapur district Nagpur, Wardha and Bhandara district, on the East Gadchiroli district, on the South Gadchiroli district and Andhra Pradesh and on the West Yavatmal district is situated.

Location Bio-geographic Zonation:-

As per the Bio-geographic Classification of India by Wildlife Institute of India, Dehra Dun the Division is Classified as :

- i) Bio-geographic Kingdom : Paleotropical
- ii) Sub Kingdom : Indomalayan
- iii) Bio-geographic Zone : 6- Deccan peninsula
- iv) Biotic province : 6-B Central Plateau

1.1.3 Constitution:-

The forest area considered as the Adjoining area is as follows:-

(Area in ha.)					
Sr. No.	Division	Reserved Forests	Protected Forests	Un-classed Forests	Total Area
1	Bramhapuri (T)	64016.100	33463.360	1087.520	98566.980
2	Central Chandra (T)	86513.412	19575.040	5819.605	111908.100
3	Chandrapur (T)	27314.240	21354.280	1699.750	50368.270
4	West Chanda (FDCM)	23929.670	--	--	23929.670
5	Central Chanda (FDCM)	31214.632	--	--	31214.632
6	Bramhapuri (FDCM)	20252.011	--	--	20252.011
	Total	253240.065	74392.680	8606.875	336239.663

1.1.4 Extent (Area Statement and Legal Status):-

The total area included in this Plan is **3362.397** Sq. Km. The total area includes Reserve Forests, Protected Forests and Un-classed Forests.

Boundaries :-

(A) External:- The external boundary of this area is well defined as it coincides with district boundary.

(B) Internal:- The internal boundaries are compartment boundaries, division boundaries, range boundaries, well defined on ground and are regularly maintained.

Legal Status:-

(i) Reserved Forests:-

The forests dealt with are notified as Reserved Forests under Indian Forest Act (VII of 1878) under the Central Provinces' Gazette Notification No. 917(i), dated the 24th February, 1879, and No. 3918, dated 5th September, 1895, and Government of Maharashtra, Revenue and Forests Department Notification No. FLD / 3685 / 9316 / C-R-42 / F-3, dated 5/5/1992.

(ii) Protected Forests:-

Under the provisions of Madhya Pradesh Abolition of Proprietary Rights (Estates, Mahals, Alienated Lands) Act 1951, all the community and other waste land were taken over by the Revenue Department. These forests were transferred from

time to time to the Forests Department as per the instructions contained in Madhya Pradesh Govt. Revenue Department No. 2249/286-XII, dated 6th April, 1951 and No.7177/CR-617-12 of 4th December 1951 with an object of managing the forests on scientific lines. Subsequently these forests were declared as Protected Forests under sec. 29 of I.F.A., 1927, notified vide M. P. Gazette Notification No.3056-1216-XI, dated 4th June, 1955 and Bombay Gazette Notification No.FLD/1056-12623-F, dated 8th August, 1957 published on 3rd October 1957. Further the Government of Bombay declared their intention to constitute these forests as Reserved Forests under Section 4 of Indian Forest Act, 1927; vide Bombay Government Gazette Notification No.FLD/1258/II-3314-E,dt. 30th May, 1959, which was published on 20th August, 1959.

1.2 Approach and Access:-

The area can be approached from Nagpur, Wardha, Yavatmal, Gadchiroli, Bhandara in all season by road. The nearest airport is Nagpur. The nearest railway station are Chandrapur, Ballarshah, Warora, Mul, Rajoli, Sindewahi and Nagbhid. Good road network with proper bridges exist all over the area.

The State Road Transport buses ply within the district. Buses from Nagpur, Wardha, Yavatmal, Gadchiroli, Bhandara are also available frequently.

1.3 The Statement of Significance:-

The location of the Adjoining area falls in “6B Central Plateau province of the Deccan Peninsula Zone” as per Bio-geographic classification of Wildlife Institute of India, Dehra Dun. These forests according to Champion and Seth’s Classification belong to the sub group 5A-C1-1B Southern Tropical Dry Deciduous Forest having Teak as dominant species.

The Core zone of Tadoba Andhari Tiger Reserve is situated almost in center of Chandrapur district so the source population of Tiger breeding in the Core has spread over the whole forest of Chandrapur district and further spreading in neighbor district. For long term conservation of Tigers this adjoining area is significant.

Economic Value:-

The area consists of Tropical Dry Deciduous Teak Forests. Teak, a high value timber species is dominant in most part of the forest area. Other timber species are

Ain, Bija, Shisam, etc. Bamboo is dominant in most of the area. Moha, Tendu are other NTFP species. Charoli, Bibla, Kadhali (Sterculia), Dhawda, Myrabolans i.e. Beheda, Hirda and Amla are also present. The production of Bamboo and Tendu leaves add to the economy of rural population.

Biological Value:-

The area is rich in flora and fauna. The flora consists of that of typical Dry Mix Deciduous forests. The animals represent wide variety of vertebrates including mammals, reptiles, birds and Amphibians species.

The mammals belongs to order Insectivora (shrews), Scandentia, (Tree shrew), Chiroptera (Bats), Primates (Monkey), Pholidota (Ant eater), Carnivora (Cats), Artiodactyla (Deers), Rodentia (Squirrels, Rats), Lagomorpha (Hare).

The reptiles consist of Squamata (Snakes) and Chilonia (Turtles). The amphibian include Frogs and Toads.

Rare and endangered fauna –

Some of this fauna is rare and endangered. The status is as follows:-

Red Data Book Vulnerable:-

- (1) Tiger – *Panthera tigris tigris*
- (2) Leopard - *Panthera pardus fusca*
- (3) Indian Bison - *Bos gaurus*
- (4) Four Horned Antelope – *Tetracerus quandricornis*
- (5) Common Indian Monitor – *Varanus bengalensis*
- (6) Indian Chameleon – *Chamaeleo zeylanicus*

Red Data Book Endangered Reptiles:-

- (1) Python – *Python molurus*

IUCN Lower Risk near Threatened Mammals Reptiles:-

- (1) Wild Dog - *Cuon alpinus*
- (2) Indian Cobra (Nag) - *Naja naja naja*
- (3) Russell's Viper (Ghonas) - *Vipera russelli*

IUCN Vulnerable Reptiles:-

- (1) Kasav-*Aspideretes leithii*

1.4 Habitat:-

1.4.1 Natural Habitat Corridors:-

The Forests of Bramhapuri Forest Division including FDCM division are distributed over Bramhapuri, Nagbhid, Sindewahi and Chimur tahsils of Chandrapur District. The area is connected to Tadoba Andhari Tiger Reserve towards West with a crop of good Mixed Deciduous Forest and availability of plenty of water. The area serves as a good natural habitat for the wild fauna and a corridor to local wild life of TATR.

The Forest of Central Chanda Forest Division including FDCM division is distributed over Ballarshah, Pombhurna and Gondpipari tahsils of Chandrapur District. The area is connected to Tadoba Andhari Tiger Reserve towards North and contiguous to Chaparala Sanctuary towards South. With a crop of good Mixed Deciduous Forest and availability of plenty of water, the area serves as a good natural habitat for the wild fauna and a corridor to local wild life of TATR and Chaparala Sanctuary.

The Forest of Chandrapur Forest Division including FDCM division are distributed over Warora, Bhadrawati, Chandrapur, Mul and Saoli tahsils of Chandrapur District. The area is in continuation with Buffer zone of Tadoba Andhari Tiger Reserve towards North and East. With a crop of good Mixed Deciduous Forest and availability of plenty of water, the area serves as a good natural habitat for the wild fauna and a corridor in between Buffer zone and Central Chanda division.

1.4.2 Regenerated & Planted Habitat Corridors:-

Area has been planted with Teak, miscellaneous tree species and Bamboo, Raising Teak, mixed, Bamboo and Fodder plantations as per provision of sanctioned Working Plan. Besides adequate number of fruit trees are retained which not only provide succor to the fauna, including avifauna, but also result in a multi level, multi species crop. Presence of wild animals such as Tiger, Leopard, Gaur, Sambar, Spotted Deer and other fauna proves that the plantations are not detrimental to bio-diversity conservation but providing a good habitat for the local wild life.

1.5 Disturbances in Habitat Corridors:-

Kanpa – Mul road, Nagbhid-Bramhapuri road and Sindewahi-Pathari road, Chimur – Warora road, Sindewahi- Chimur road, Gangalwadi-Eakra-Sindewahi road and railway line from Bramhapuri to Chandrapur are passing through the forest area of Bramhapuri division so cause of disturbances in this habitat.

Nagpur-Chandrapur road, Bhadrawati-Chandankheda road, Chandrapur-Gadchiroli road, Chandrapur-Allapalli/ Adilabad road, Mul-Gondpimpri road, Chichpalli-Ballarshah road, Mul-Petgaon-Palasgaon-Chimur road and railway line from Nagpur to Kazipeth, Chandrapur to Wadsa are passing through the forest area of Chandrapur and Central Chanda division so cause of disturbances in this habitat.

The canals of Gosikhurd irrigation project are also the cause of disturbance in this habitat.

1.6 Stepping Stones:-

Area is covered by a good crop of Mixed Deciduous Forests interspersed with grassy blanks and a network of perennial water holes to support wild life.

1.7 Map Showing Landscape Beyond Core and Buffer Areas:-

The Map of Chandrapur district showing the area of Bramhapuri, Chandrapur and Central Chanda divisions (The area of FDCM Division are within territorial division) along with Core and Buffer zones of Tadoba Andhari Tiger Reserve is attached (**Map No. 1**)

1.8 Major Land use Classification in the Area:-

The Adjoining area consists of mainly forest, agriculture land, industrial area, mining area and village/town/cities.

1.8.1 Forest:-

The forests are of type Southern Tropical Dry Deciduous Forests and under forestry working by territorial division and FDCM.

1.8.2 Agriculture Land:-

The agriculture land generally belongs to small marginal farmers. The main crop is Paddy, Soyabin and Cotton. Irrigation facility is available only to 25% agricultural land.

1.8.3 Village/ Towns/ Cities:-

There are large townships within the adjoining landscape namely Bramhapuri, Chimur, Nagbhid, Sindewahi, Chandrapur, Ballarshah, Mul, Rajura, Warora, Bhadrawati, Saoli, Gondpipri and Korpana. Following table shows taluka wise villages present in the Tadoba Andhari Landscape out side Core and Buffer zone :-

Sr.No.	Tahsil	Total villages	Sr.No.	Tahsil	Total villages
1	Ballarpur	35	9	Bhadravati	146
2	Gondpipri	98	10	Korpana	113
3	Sindewahi	100	11	Warora	174
4	Mul	103	12	Chimur	244
5	Chandrapur	84	13	Jiwati	83
6	Brahmapuri	140	14	Pombhurna	71
7	Nagbhir	138	15	Saoli	111
8	Rajura	111		Total	1751

1.8.4 Other Uses:-

The district is rich in minerals especially coal and limestone. There is heavy pressure of mining. Many coal mines (Open cast and under ground) are operating in the area. Other industries are Paper mill, Cement factories and Thermal power plants.

1.8.5. Quality of Habitat:-

The area is covered with pristine Dry Deciduous Forests having a good crop of mixed vegetation including varieties of fruit trees. Bamboo is found to occur all over in these forests except heavily eroded areas and exposed rock. Streams passing through the tract drains in to Wainganga River and its tributaries. Altitudes of various hills in the tract vary from 180 m. to 295 m. above M.S.L.

Diverse landscape and vegetation as well as round the year availability of water make the areas an ideal wild life habitat.

1.9 Geology, Rock, Soil, Climate and Water:-

Geology, Rock, soil:-

Northern part of the tract represents mainly one type of Geological formation viz. Archen, represented by gneisses, schistone and granites. The soil is clayey loam or sandy loam and is moderately deep. The soil along slopes is shallow having boulders.

The central part of the tract represents mainly by Deccan trap, alluvial laterite happen including Lamenta beds. This belongs to Gondwana and Vindhya system. Rocks of Granite, quartz, gneiss etc are present. The soil is of alluvial and laterite origin, which is sandy with stretches of Yellow Brown and Grayish loom. At places it is overtopped with Black Cotton Soil of varying thickness.

Areas north east of village Kanhargaon and north of village Aksapur of Zaran Range which is Southern part of tract is comprised of sedimentary rocks of puruna group. This is represented by quartzite and lime stones of englomarate formation. Soil derived from this type of rock formation is clayey loam and supports medium site quality (II to IV a) forest. Rest of the area of Zaran Range is comprised of the Kamthi series of rock belonging to the lower Gondwana systems, Kamthi series is represented by the ferrusious sand stones and clays, both white and yellow. Soil derived is fairly deep; fertile and sandy loam, and support high quality mixed forest. The soil however being sandy loam, soft and friable is easily susceptible to erosion. In some patches of this tract, top layer of soil has been eroded due to sheet and gully erosion rendering the site comparatively less fertile supporting only low quality (III b) forest.

Western part of Kanghargaon, Tohogaon and Dhaba Ranges which is again Southern part of the tract are covered by the Kamthi series rocks represented by sand stones and clay. The remaining forest area to the east of Dhaba is occupied by the igneous rocks such as garbo and pyroxenite and gneisses of the Pre cambrium age. The soil west to the Dhaba is deep and fertile sandy loam supporting high quality mixed forest and that to the north east of Dhaba is grayish clay supporting medium quality teak forest (II to IVa). Narrow band of lime stone formation belonging to Vindhyan series exists extending between Dongargaon in the south east to Karanji in the centre. Soil is clayey loam of moderate depth and fertility and supports forest of medium (III) quality.

Climate:-

Three distinct seasons can be recognized viz, summer, rains and winter. The summer is mostly hot and dry. During summer temperature shoots up fairly high. The fierce heat of April and May becomes unbearable. The highest temperature is 48.3⁰ C and the lowest minimum temperature recorded is 2.8⁰ C. The weather cools down considerably during monsoon. Average rainfall is 1365 mm. Most of the precipitation occurs during the month of June, July and August ranging from 200 to 400 mm per month. Rainfall during remaining months is sporadic and varies from 2.5 mm to 72.5 mm per month. Atmosphere is humid and sultry. Frost is unknown.

Water:-

The entire area of the district falls in the Godavari basin. The area is drained by major tributaries of the Godavari River. The major tributaries are Wardha, Wainganga and Painganga rivers. The Painganga, flowing along part of the Western boundary, meets the Wardha river at Wadha near Ghugus to form the Wardha river. It further flows in NW-SE direction finally merging into the Wainganga river at the South Eastern corner of the district. After this confluence the river at the South Eastern corner of the district. After this confluence the river along with their sub tributaries rising in the uplands within the district drain whole area of the district.

The Wainganga river which flows along the border of Chandrapur and Gadchiroli district is the main river of the district. The Wardha is the only perennial river in the district having the longest river course as compared to the other two major rivers. The main tributaries of the Wardha river are the Erai rises in the Northern part of Warora tahsil and flows along due South over a length of 80 km. until it meets the Wardha just South of Chandrapur. The Painganga flowing along Western border takes East West course and then joins the Wardha river at Wadha near Ghugus.

Though the forests have good perennial water sources, the overall availability of water in the inhabited areas is scanty particularly in the summer season. Drinking water is available through wells and tanks in most of the villages. Water table is 20 to 25 meter deep. However, at a depth of 100 meter ample quantity of water is available. Wells generally dry out during the hot summer months of May and June. Water table recedes in summer and water is scarce.

Major perennial sources of water are Asolamendha, Maregaon, Khairi, Pawanpar, Kachchepar, Ghodazari, Chargaon, Labhan Srad, Irai, Naleshwar, Lalnala and many other village tanks.

1.10 Vegetation Types:-

1.10.1 Composition and Condition of the Crop:-

According to Champion and Seth the forest tract of these Divisions fall under the sub group 5A i.e. Southern Tropical Dry Deciduous forest which are classified into the followings :-

- A) Southern Tropical Dry Deciduous Teak bearing forest Type 5A/C1
- B) Southern Tropical Dry Mixed Deciduous forest Type 5A/C3

The forests of this tract are Mixed Forests of site quality varying from II to IV with crop density varying from 0.2 to 0.6. The middle canopy is dense. Natural regeneration is scanty. Natural Bamboo is abundant along *nalas* and on hills. Major common trees and shrubs occurring in the area are as under:-

1.10.2 Floristic Composition:-

(A) Top canopy:- *Tectona grandis* (Teak), *Pterocarpus marsupium* (Bija), *Anogeissus latifolia* (Dhawada), *Terminalia tomentosa* (Ain), *Lannea grandis* (Movai), *Madhuca latifolia* (moha), *Bombax ceiba* (Semal), *Terminalia arjuna* (Arjun), *Diospyros melanoxylon* (Tendu), *Lagerstroemia parviflora* (Sehna), *Mitragyna parviflora* (Kalam), *Choloroxylon switenia* (Bhera), *Dalbergia paniculata* (Dhoban), *Boswellia serrata* (Salai), *Adina cordifolia* (Haldoo), *Xylia xylocarpa* (Surya), *Terminalia bellerica* (Behada), *Albizzia odoratissima* (Chichawa)

(B) Middle Canopy:- *Cleistanthus collinus* (Garadi), *Zizypus xylocarpa* (ghot), *Emblia Officinalis* (Awala), *Accacia Catechu* (Khair), *Bauhinia purpurea* (Apta), *Grewia tiliifolia* (Dhaman), *Dolichndrone falcata* (Medsing), *Soyamida febrifuga* (Rohan), *Acacia leucopholia* (Hiwar), *Holarrhena antidysentrica* (Kuda), *Buchnanian lanzan* (char), *Semecarpus anacardium* (Biba), *Butea monosperma* (Palas), *Ixora parviflora* (Lokhandi), *Dalbergia latifolia* (Shisham), *Cassia fistula* (Amaltas), *Morinda tinctoria* (Ali)

(C) Lower canopy:- *Cassia tora* (Tarota), *Helecteris isora* (Muradseng), *Woodfordia floribunda* (Jilbili), *Gardenia lucida* (Dikanji), *Lantana camera* (Raimumia), *Dodania viscosa* (Gilbilli), *Tephrosia purpurea* (Diwali), *Cassia auriculata* (Tarwat), *Dichrostachys cineraria* (Yelati) etc.

(D) Climbers:- *Butea superba* (palaswel), *Acacia pinnata* (Chilati), *Calycopteris floribunda* (kukudranji), *Zyzyphus oenoplia* (Ironi), *Ichnocarpus frutesens* (Dudhivel), *Abrus precatorius* (Gunj), *Mucuna pruriens* (Kachhuri), *Celastrus paniculata* (Malkagani), *Hemidesmus indicus* (Khobarwel), *Cocculus villosus* (wasanwel)

(E) Bamboo and grasses:- *Dendrocalamus strictus* (Bans), *Eragrotis tenella* (bhurbhuri), *Themeda triandra* (Ghonad), *Dicanthium arnnulatum* (Marvell), *Aristida adecensionis* (Kusli), *Iseilema laxum* (Mupheim)

(F) Regeneration:- The regeneration of Bija, Ain, Kalam, Teak, Lendia, Dhwada, Tendu is noticed. Regeneration of Garadi and Anjan is abundant; however natural regeneration is adversely affected due to repeated fires and grazing.

1.11 Wild Fauna and Habitat:-

The habitat consists of undulating landscape with mostly plains and few hills. There are many perennial rivers and streams with mosaic of high forests, meadows and worked areas. This forms a perfect habitat for Tigers and its co predators like Panther and Wild dogs. The prey base consists of Sambar, Cheetal, Barking deers, Wild boars, Langoors etc. The habitat has been degraded at some places, which are interspersed with habitations causing man animal conflict.

The census figure of different divisions as available is attached as **Appendix-I**.

1.12 Major changes in the Landscapes (settlements/other infrastructure):-

The landscape is changing in the recent past with the upcoming of coal mines of Western Coal Fields Ltd., Chandrapur Super Thermal Power Station, other new private thermal power stations, cement factories, other mines etc.

1.13 Administration and Organizations:-

The adjoining areas included in this Plan consist of three Territorial Divisions and three divisions of Forest Development Corporation of Maharashtra. The territorial divisions are under the Chief Conservator of Forests (Territorial), Chandrapur Circle and the FDCM divisions' area under the General Manager, North Chandrapur Region FDCM. Administrative units of each division are as follows:-

Sr.No.	Division	ACF's	Ranges	Rounds	Beats
1	Bramhapuri Division	5	6	21	92
2	Central Chandra Forest Division	3	7	23	95
3	Chandrapur Forest Division	2	5	17	65
4	West Chanda FDCM Division	2	4	13	23
5	Central Chanda FDCM Division	2	4	16	33
6	Bramhapuri FDCM Division	2	5	9	18

CHAPTER – 2

STATUS OF TIGER AND CO – PREDATORS

2.1 Distribution and Abundance:-

The major predator “Tiger” is distributed almost all over the adjoining area. There may be seasonal variation depending upon the presence of water and prey species. Panthers and Wild Dogs are co-predators of Tigers found in this area. Distribution and abundance status of Tigers and its Co- predators is as under:

Distribution of Tiger and Co-predators as per 2012 estimation

Sr. No.	Division	No. of Tigers	No. of Panthers
1	Bramhapuri (T)	22	25
2	Central Chandra (T)	10	9
3	Chandrapur (T)	6	12
4	West Chanda (FDCM)	3	5
5	Central Chanda (FDCM)	7	1
6	Bramhapuri (FDCM)	10	5

Map showing presence of Tiger in Chandrapur district is enclosed as Map No. 2.

2.2 Prey-Predator Relationships

The prey base is satisfactory. The prey consist of Cheetal, Sambar, Barking deer, Blue bull, Four Horned Antelopes, Bison, Wild boars, Langur.

The food habit study indicates that large prey like Sambar and Gaur contributes about 70% of Tiger diet. Medium sized prey like Cheetal and wild Boar contributes 20% and remaining prey species contributes about 10% of the diet. Sambar, Cheetal and Wild Boar forms important prey for all the three top predators. Tiger prefers large prey like Sambar and Blue Bull while Cheetal is preferred by Panthers and Wild Dogs.

The systematic assessments of prey predator biomass have not been done in the adjoining areas, so actual ratio and relationship can not be quantified.

2.3 Assessment of Threats

2.3.1 Poaching:-

The hunting culture of tribals in the remote areas is responsible for depletion of prey base. The poaching of carnivores is rare but retaliation killing of big cats by poisoning the cattle kills is common. Traditional hunting by tribals during 'Pola' period (no work days during rainy season) is common in remote areas. The Naxalite threat in some areas also makes management difficult. Organized poaching by Baheliya community can not be ruled out.

The following table shows territorial division wise number of wildlife offences booked:-

Year	Chandrapur	Bramhapuri	Central Chanda	Total	Remarks
2004-05	7	4	16	27	3 Leopards died of poisoning in Chandrapur division
2005-06	4	7	25	36	3 Tiger (Natural) death in Each one in Chandrapur/ Bramhapuri/ Central Chanda dn. & 3 Leopard (Natural/ Snake Poison/ Poaching) death (1) Bramhapuri and (2) Central Chanda dn.
2006-07	2	2	21	25	2 Case of Tiger (Poison/Accident) death in Central chanda & Chandrapur division & 1 Leopard killed by Electrocution in Central Chanda dn.
2007-08	9	9	19	37	1 case of Tiger killed by Forest staff because of dangerous to human being. & 8 cases of Leopard (Natural/ Accident) death (1) Chandrapur, (6) Bramhapuri, (1) Central Chanda division
2008-09	39	21	15	75	1 case of Tiger Natural death in Bramhapuri division & 9 Leopard (Natural/Accidental) deaths (2) Chandrapur, (6) Bramhapuri and (1) Central Chanda dn.
2009-10	42	39	9	90	3 Tiger (Accident/Fighting with other animal) death in Chandrapur/Bramhapuri dn. & 4 Leopard (Natural/Accidental) death (3) Bramhapuri and (1) Central Chanda dn.
2010-11	31	28	25	84	3 Tiger (Fighting) death in (2) Chandrapur/(1) Bramhapuri dn. & 6 Leopard (Natural/Accidental/ Electrocution/fighting) death (4) Chandrapur, (1) Bramhapuri and (1) Central Chanda dn
2011-12	24	23	29	76	3 Tiger (Natural/Electrocution/ Accidental) death in (1) Chandrapur/(2) Bramhapuri dn. & 14 Leopard (Natural/Accidental/ fighting/ Electrocution) death (8) Chandrapur, (6) Bramhapuri.
2012-13	32	24	32	88	3 Tiger (Natural/Fighting) death in (2) Bramhapuri (1) Central Chanda dn. & 7 Leopard (Natural/Accidental/fighting) death (4) Chandrapur, (2) Bramhapuri (1) Central Chanda dn.
2013-14	34	7	22	63	1 case of Tiger Accidental death in Chandrapur division & 5 Leopard (Natural/Accidental/fighting) deaths (3) Chandrapur, (2) Bramhapuri dn.

2.3.2 Illicit cutting:-

The forest area in the landscape is surrounded on all sides by well populated villages. In spite of regular patrolling by the field staff some incidences of illicit cutting are reported wherein villagers residing in the bordering areas resort to such activities to meet their need of small timber for making agricultural implements, pole, fire wood, etc.

2.3.3 Grazing:-

As number of village and cattle population is high, the grazing incidences are more than capacity of the forest. So the over grazing adversely affects the quality of habitat.

2.3.4 Forest Fires:-

Forest fires are common between the periods starting from late February to May end till the arrivals of monsoon. Repeated fires have resulted in poor establishment of natural regeneration and destruction of organic matter. Severe fire causes scorching that leads to unsound and hollow stems which further render them vulnerable to fungus and insect attack. Fire causes soil erosion indirectly by destroying vegetal soil cover. Fires are set by people with an interest to collect flowers, fruits, good Tendu leaves, flush and grass.

2.3.5 Railways: This landscape is having major railway lines.

- 1) New Delhi – Chennai Railway line
- 2) Mumbai – Howdah Railway line
- 3) Gondia – Chanda Fort Railway line

Railway lines 1 and 2 are very busy lines and are a major threat to wild animal moving in corridor. Railway line 3 passes through forest area and no incidences of accidents of wildlife have taken place on this railway line in the past.

2.3.6 Roads: Major roads like, Nagpur–Chandrapur–Rajura–Asifabad, Chandrapur–Mul–Umred–Nagpur, Chandrapur–Aheri–Sironcha and other roads are having heavy traffic in day and night. Nagpur Chandrapur Rajura road is now a 4-laned road. Which has increased the threat?

2.3.7 There are no existing and proposed hydro electric projects in the corridor area.

2.3.8 Major Dams: Major dams like Gosi khurd, Chargaon, Chandai and proposed dams like human dam break the corridors.

Except few all the villagers are not happy with the presence of wild animals in their areas as the herbivores raid their crops and carnivores lift their cattle and even kill/ injure human beings.

3.3 Resource Dependence of Villages:-

The villages in nearby forest area are dependent on forest resource like firewood, grass for their day to day need. Livelihood of some households depends on forest resources like. Bamboo, firewood, Tendu leaves, Moha flowers etc.

3.4 Human wildlife conflicts:-

At present the human and wild life conflict is at its top in this area. The crop raiding by Wild boars, Nilgai are common in all villages. The cattle killing by Tigers and Leopard is increasing day by day due to increased number of cattle and unabated grazing in all part of forest area. The killing of human being by Tiger/ Leopard has multiplied the human wild life conflict.

Data showing incidences of Human injuries / death and cattle killed by Tiger and Panther and compensation paid

Sr. No.	Year	Human Death		Human Injury		Cattle kills	
		No. of Cases	Compensation paid in Rs	No. of Cases	Compensation paid in Rs	No. of Cases	Compensation paid Rs
Bramhapuri Division							
1	2010-11	5	1000000	16	297573	562	2586177

3.5 Assessment of Inputs of Line Agencies/ Other Departments

Though line agencies/other department are having many schemes for livelihood provisions, natural resource depending reduction schemes but they are not integrated and so effects of such schemes are not visible. Now Government of Maharashtra, vide Government Circular No. FDM-2011/C.N.100/F-2, dated 22.12.2011 has instructed all agencies/ department of State Government to integrate their rural development programmes in the villages situated in the forest.

PART B: - THE PROPOSED MANAGEMENT
CHAPTER – 4
VISION, GOALS, OBJECTIVES AND PROBLEMS

4.1 Vision:

To strengthen the linkages/corridor between the source population of Tigers of Tadoba Andhari Tiger Reserve and other Tiger bearing areas in the landscape.

4.2 Management Goals:

- Management of corridors and adjoining area to maintain connectivity to other Tiger bearing areas for ensuring gene flow as an ecological requirement for long term survival of the species.
- Habitat development of the corridor/ adjoining area for easy movement and dispersal of the wild animals.

4.3 Management Objectives:

- Suitable modification in the existing management practices so as to upgrade and maintain the ecological status of the connectivity.
- Implementation of co-existence agenda with a focus on the wildlife habitat parameters and the livelihoods/developmental needs of the local communities.
- Involvement of local communities, line agencies and other stakeholders for management of such areas.

4.4 Problems in Achieving Objectives:

- High level of biotic interference in the area is a big management challenge.
- Lack of an interdepartmental coordination agency may be a major problem in management of corridor.
- Some of the forest areas in the district are highly degraded.

4.5 Strengths-Weaknesses-Opportunities-Threats (SWOT) Analysis

Strengths :-

- There is good vegetation in around 80% area of adjoining landscape.
- Many existing water bodies is a strength.
- Presence of fairly good wild life population with breeding tigress in adjoining landscape.

Weaknesses:-

- Fragmentation due to lack of vegetation in some area of adjoining landscape is biggest weakness.
- Lack of good grassland is major weakness of the adjoining landscape.
- A corridor break of approximately 7 km is noticed between Central Chanda Division and Chaprala Wildlife Sanctuary. Effort needs to be made to build up this corridor to have continuity to the southernmost dense forests of Gadchiroli Circle.
- Activities of mining for coal and lime stone and existence of cement factories, paper mill etc. put lot of pressure on natural resources which are being obtained from forest land.
- New Delhi-Chennai and Chanda Fort-Gondia railway track passing through the Division makes available faster movement for poachers.
- Busy broad tar roads viz. Chandrapur to Asifabad, Chandrapur to Adilabad, Chandrapur to Aheri, Nagpur to Chandrapur, Chandrapur to Gadchiroli etc. passing through the forest areas are cause of fragmentation for forest resulting in cases of accident of wildlife crossing the road.
- Very little budgetary provision for wildlife management in territorial/ FDCM divisions in adjoining landscape.

Opportunities:-

- Large chunk of Reserve Forest area is a good opportunity to restore the traditional corridor and make suitable the adjoining landscape for dispersal of wild animal including Tiger.
- Good public sentiment to protect the Tiger can be a opportunity which will help in removing the existing weaknesses.

Threats:-

- Railway lines, roads and electric lines passing through the corridor is a big threat.
- Poaching of Wild animals in corridor is a challenging threat.
- Increased naxal activities are posing threat to forest and wildlife management.
- Upcoming mining industries are also posing threat to the wildlife.
- Electric lines are the threat to the wildlife.
- There are several bottle necks identified in TATR to Bor Tiger Reserve, TATR to Umred-Karandla Wildlife Sanctuary, TATR to Navegaon-Nagzira Tiger Reserve, TATR to Tipeshwar Wildlife Sanctuary and TATR to Kawal Wildlife Sanctuary. These are major threats to the dispersal of wildlife from source population.

CHAPTER 5

MANAGEMENT STRATEGIES

5.1 Delineations of Corridors and other habitat used by Tigers and co-predators

The Buffer area has contiguity with forests of Bramhapuri and Chandrapur Forests Divisions. Beyond this the corridor exists to forests of Nagpur, Bhandara and Gondia Divisions through Wadsa Forest Division. The Corridors also exists to Central Chanda, Allapalli, Sironcha and Bhamragad Forests Divisions. The corridor exists to Chaprala and Bhamragad Wildlife Sanctuaries. This corridor extends to Indrawati Tiger Project in Chhattisgarh State and also to forests of Andhra Pradesh State in the South. The corridor is broken at some places.

Actual evaluation and delineations of above corridors has not been done as detailed systematic long term studies were not done. A project titled “**Long term monitoring of Tiger, Co-predators and prey species in Tadoba-Andhari Tiger Reserve and adjoining landscape**” will be implemented by Wildlife Institute of India [funded by NTCA (75%) and State Government (25%)] from 2013-14 and will be continued up to 5 years and can further extend up to 10 year. This scientific research project will give sufficient data for delineations of corridor.

Wildlife Conservation Trust, Mumbai and Wildlife Trust of India, Noida have studied the corridors connecting Tadoba Andhari Tiger Reserve the source population, which is very important therefore is incorporated as below:

Background:-

Tadoba-Andhari Tiger Reserve (TATR) and its immediate surroundings (buffer zone and Brahmapuri division) forms an important source population in the larger central Indian landscape and the area with 69 tigers (Jhala *et al*, 2011) forms the biggest population of tiger in the landscape (2nd All India Tiger Estimation) (Jhala *et al*, 2011).

As per the Wildlife (Protection) Act, 1972, corridors for dispersal of tigers are defined as “*ecologically compatible land uses in the tiger reserve and areas linking one protected area or tiger reserve with another for addressing the livelihood*”

concerns of local people, so as to provide dispersal habitats and corridors for spill over population of wild animals from the designated core areas of tiger reserves or from tiger breeding habitats within other protected areas”.

The following Notes and accompanying Maps and Excel Tables identify and list down the forest compartments that form corridors connecting TATR to other tiger reserves (Kawal, Bor, Melghat and Navegaon-Nagzira) and adjoining wildlife sanctuaries (Umred Karhandla and Tipeshwar).

Methodology:-

As per the guidelines for preparation of the Tiger Conservation Plan (TCP) and its supplement (Part C “For the Corridor”) (Document number NTCA/01/07) WCT have delineated the corridors at forest compartment level from TATR to other tiger reserves and wildlife sanctuaries.

WCT have taken the following data to produce the corridor delineation maps:

- a) Compartment level Maps
- b) Macro level delineation of corridors (Least Cost Paths) as per 2010 country level tiger assessment (All India Tiger Estimation, 2010)
- c) Vectorised forest cover map from Forest Survey of India converted from geo-referenced raster images with pixel resolution of 24 meters
- d) Results from the Occupancy surveys conducted by the Wildlife Trust of India (WTI)
- e) Results from the Genetic connectivity study by the Wildlife Conservation Trust (WCT)

Genetic connectivity:-

A study was conducted by WCT to assess connectivity among tiger populations at a finer scale and evaluate the importance of forest patches (newly declared protected areas) in parts of central India, especially the Greater Tadoba Landscape (GTL).

Non-invasive sampling of tiger DNA was carried out by collecting scats from TATR and its satellite tiger populations in protected areas such as Pench National Park, Mansinghdeo, Bor, New Bor, Tipeshwar, Umred-Karhandla and Chaprala Wildlife Sanctuaries and territorial forest divisions such as Bramhapuri and South Chanda.

The identification of different populations, genetic structure and assignment tests were based on 14 polymorphic microsatellite marker data of 104 individual tigers. The assignment tests shows evidence for frequent dispersal of individuals in this landscape and provides insight to the importance of presence of intervening forest patches / corridors and the network of newly declared satellite PAs surrounding tiger-source populations. The genetic assignment results show total of 19 dispersal events, of which eight were between Bramhapuri (BRM) and TATR. Although BRM and TATR are considered as single population, we assigned BRM as separate population to understand the local dynamics at a finer scale. Single sample from Nawegaon was assigned to BMR, indicating movement from BMR to Nawegaon. Similarly, there is tiger movement between Tipeshwar-Kanhargaon-TATR and between Bor-TATR.

Assignment tests between GTL and other PAs like Pench, Nagzira and Melghat suggests that there is connectivity between Umred Karhandla-Nagzira; Bor–Melghat and Pench -Melghat.

NOTE:-

As per the supplement to NTCA technical note No. NTCA/01/07 (Guidance document for preparation of tiger conservation plan) micro level ground truthing using transects for spatial presence / abundance of flora and fauna; comparison of wild animal species distribution with reference to nearest PA; profiling of micro watersheds; natural watercourses and unique topographical features is yet to be added to the current mapping exercise.

CORRIDOR 1:-

Tadoba Andhari Tiger Reserve to Bor Tiger Reserve (Bor, New Bor and Extended New Bor Wildlife Sanctuaries)

Please see Map 1 accompanying this document and Compartment list for Corridor 1 (TB) for a list of the compartments comprising this corridor. There are four gaps in this corridor, details of which are given below:

Gap 1(Gap TB1) : The first gap / disruption to the north of TATR is between the Aalesur Beat of Nagpur Division and Salebhatti Beat of Nagpur Division. The area between these two beats, Aalesur and Salebhatti, is comprised of four compartments (Compartment 377 and 378 of Bhesi Beat in Chimur Range, Brahmapuri Division, two

other Compartment for which compartment numbers are not available but they fall under FDCM Brahmapuri Division as per data handed over to WCT for corridor delineation).

Action areas for Gap TB1:

- 1) There are two gaps due to this bottleneck/disruption in this area and they measure a distance of 2 km and 0.4 km respectively.
- 2) The two compartments of FDCM Brahmapuri need to be identified by their compartment number and included in the corridor map.
- 3) This bottleneck also has other land use, most likely not under the management of Forest Department. Land use in this area needs to be ground truthed and appropriate mitigation measures need to be put in place.

Gap 2 (Gap TB2): The second gap is between Sirsi Beat, Nagpur Division and Sukli Beat, Nagpur Division. The gap area is comprised of Nandra West Beat, Nagpur Division in which a lake is present. The presence of the lake has a positive impact on tiger dispersal.

Action Areas for Gap TB2:

- 1) The gap is approximately 7.4 km in Nandra West Beat, Nagpur division.
- 2) The land use in Nandra West Beat, Nagpur Division needs to be ground truthed and appropriate mitigation measures need to be put in place.

Gap 3 (Gap TB3): The third gap is between Chargaon Beat, Butibori Range, Nagpur Division and Sawali Beat, Hingna Range, Nagpur Division.

Action Areas for Gap TB3:

- 1) The total gap is approximately 23 km with the presence of a lake and two compartments (Compartment 311 of Junapani Beat, Butibori Range and Compartment 312, Butibori Beat, Butibori Range).
- 2) It is important to note that this area has been used by a dispersing tiger in August 2012, which was found near Butibori area and subsequently moved on to the Chargaon Beat.
- 3) The land use needs to be ground truthed and appropriate mitigation measures need to be put in place.

Gap 4 (Gap TB4): This gap is between the Pitichuha Beat, Butibori Range, Nagpur Division and Pimpaldhara Beat, Hingna Range, Nagpur Division.

Action Areas for Gap TB4:

- 1) The total gap is approximately 25 km but there are two forest compartments Compartment 309, Sukli Beat, Butibori Range and Compartment 310, Sukli Beat, Butibori Range.
- 2) The land use needs to be ground truthed and appropriate mitigation measures need to be put in place.

NOTE:-

Additional data in the form of Compartment boundaries for Nagpur division are required as the data handed over to WCT comprised of only beat boundaries.

Bottleneck 1: This area is a bottleneck as the total corridor width in this area is 1.5 km. This comprises of the following five compartments

- Compartment 371, Beat Chimur, Range Chimur, Brahmapuri Division
- Compartment 360, Beat Chimur, Range Chimur, Brahmapuri Division
- Compartment 357, Beat Chimur, Range Chimur, Brahmapuri Division
- Compartment 15, Beat Khadsangi, Range Chimur, Brahmapuri Division
- Compartment 27, Beat Chimur, Range Chimur, Brahmapuri Division

The State Highway No. 233 also passes through this corridor and appropriate mitigation measures need to put in place here, especially when this road may come up for expansion. A male tiger BRM-T-13 has been found in this area in year 2013 by a WTI research team. Tigers use this area regularly to move between Chimur Range, Brahmapuri and TATR Buffer.

National Highway 7 (Nagpur to Hyderabad) also bisects this corridor and the road here has been expanded. Appropriate mitigation measures need to be put in place by the NHAI. **(Appendix-II)**

CORRIDOR 2:-

Tadoba-Andhari Tiger Reserve to Umred Karhandla Wildlife Sanctuary

Please see Map 2 accompanying this document and Compartment list for Corridor 2 (TUK) for a list of the compartments comprising this corridor. This corridor is mostly unbroken with one narrow gap of about 200 meters which is mostly a digitising error (needs to be verified) and therefore it has been classified as a

bottleneck. The entire corridor has tiger presence as determined by the occupancy study carried out by WTI. The entire corridor needs to be ground truthed for encroachments

Bottleneck 1: (TUK 1): The first bottleneck in this corridor is of a width of 627 meters in compartment 73, Beat Girgaon, Talodhi Range, Division Brahmapuri and Compartment No. 234, Navargaon Beat, Sindewahi Range, Division Brahmapuri.

Bottleneck 2: (TUK 2): The second bottleneck in this corridor is of a width of 860 meters in compartment No. 70, Kachepar Beat, Talodhi Range, Brahmapuri Division and Compt. No. 38, Kajalsar Beat, Talodhi Range, Brahmapuri Division.

Bottleneck 3: (TUK 3): The third bottleneck in this corridor is of a width of 870 meters in compartment no. 494, Rengatur Beat Nagbhid Range, Brahmapuri Division. The state highway from Nagpur to Sindewahi/Nagbhid passes through this corridor and appropriate mitigation measures need to be put in place.

Bottleneck 4 (TUK 4): The fourth bottleneck is in this corridor is of width of 2 km in compartment no. 324, Nisti Beat, Pauni Range, Bhandara Division. There is some gap in forest cover due to lake backwaters in Nisti beat where ground truthing for land ownership needs to be done. A highway from Nilaj to Pauni also cuts through this corridor and appropriate mitigation measures need to be put in place. **(Appendix–III)**

CORRIDOR 3:-

Tadoba-Andhari Tiger Reserve to Navegaon-Nagzira Tiger Reserve

Please see Map 3 accompanying this document and Compartment list for Corridor 3 (TN) for a list of the compartments comprising this corridor.

The following two bottlenecks (Bottlenecks 1 and 2) are common with the Corridor 2.

Bottleneck 1 (TUK 1): The first bottleneck in this corridor is of a width of 627 meters in compartment 73, Beat Girgaon, Talodhi Range, Division Brahmapuri and Compartment No. 234, Navargaon Beat, Sindewahi Range, Division Brahmapuri.

Bottleneck 2 (TUK 2): The second bottleneck in this corridor is of a width of 860 meters in compartment No. 70, Kachepar Beat, Talodhi Range, Brahmapuri Division and Compartment No. 38, Kajalsar Beat, Talodhi Range, Brahmapuri Division.

Bottleneck 3 (TN1): The third bottleneck is of width of 1.8 km in compartment no. 635, Mindhala Beat, Nagbhid Range, Brahmapuri Division, and compartment no. 87, Mindhala Beat, Nagbhid Range, Brahmapuri Division. The Nagpur to Mul state highway passes through this corridor and appropriate mitigation measures need to be put in place as this corridor is heavily used by tigers.

Bottleneck 4 (TN2): The fourth bottleneck is of width 2.8 km between New Navegaon Wildlife Sanctuary and two adjoining compartments no. 545, Maramjob Beat, Deori Range and Compartment 1576, Sahakepar Beat, Sadak Arjuni Range. National Highway 6 passes through this area and is scheduled for expansion into a 4/6 lane expressway and appropriate mitigation measures need to be put in place.

Gaps / Disruptions

Gap 1 (Gap TN3): There is a 1.6 km gap between Compartment no. 555, Duggipar Beat, Sadak Arjuni Range, Gondiya Division and compartment no. 554, Bamhni Beat, Sadak Arjuni Range, Gondiya Division. Land use and ownership needs to be ground truthed and encroachments assessed to plan appropriate mitigation measures. National Highway 6 passes through this area and is scheduled for expansion into a 4/6 lane expressway and appropriate mitigation measures need to be put in place.

Gap 2 (Gap TN4): This gap separates the entire South-Bramhapuri range (Bramhapuri Division) from the Porla range (Gadchiroli Division).

Gap 3 (Gap TN5): This gap separates Pauni range (Bhandara Division) and North-Bramhapuri range (Bramhapuri Division) from Lakhandur range (Bhandara Division) and ArjuniMorgaon range (Gondia Division).

Gap 4 (Gap TN6): This is the third disconnected zone between Lakhandur range (Bhandara Division), Arjuni Morgaon range (Gondia Division) and Adyal range (Bhandara Division).

Gap 5 (Gap TN7): This gap exists between Adyal range (Bhandara Div.) and Koka WLS.

There are four major gaps (Gap 2,3,4&5) where forest connectivity is severely affected and need immediate attention. Of these, two are around the river Wainganga. Vast stretch of forestland has been diverted for the construction of the Gosekhurd irrigation canals. This canal starts from the Gosekhurd dam on the *Waingangā* river

near the Umred-Karhandla WLS and passes through the forest bifurcating the Bramhapuri division into three fragments. As the canal reaches Bramhapuri it splits into two, the Right Bank Canal (RBC) and the Left Bank Canal (LBC) both running in the north-south direction through the forest. These canals are deep with steep concrete walls which is a death trap for wild animals. There has been already a case of tiger getting trapped along the canal in addition to several other animal casualties. Safe crossing-paths (at least 30 meter wide) should be created at regular intervals all along these canal sections that fall in the corridor, for safe passage of wild animals. These over-passes should be sufficiently wide (at least 30 meter wide) for animals to be use them without inhibitions. Detailed maps of the Gosekhurd Canal system are required to work out necessary, compartment-wise mitigation measures.

Roads and Railways: With several villages being connected with metalled road network, there has been an increase in vehicular traffic even in the remote forest areas leading to regular road-kills of wild animals. Speed breakers and signboards on roads passing through areas with high tiger and tiger prey occupancy will help create awareness and reduce mortalities, but in future with increasing traffic, the only viable solution for mitigating the negative impact of roads is to build flyovers with sufficient height to allow both the vehicles and animals to pass safely. National Highway 6, State Highways 9 and 233 are roads with heavy traffic. They cut across vital forest linkages in this corridor. NH 6, which is proposed to be expanded cuts through the Nagzira-Navegaon corridor. SH 9 cuts the prime linkage of the TATR with Bramhapuri Division and SH 233 cuts the Bramhapuri–Umred Karhandla corridor. With increase in vehicular traffic and road-connectivity, roads like the Sindewahi-Pathri road and Sindewahi-Gunjewahi road will pose serious threat in the near future. Upgradation of narrow gauge railways to broad-gauge such as the Gondia-Chandrapur line will lead to increase in animal mortalities, as it will lead to increase in a) train frequency, b) train speed and c) number of bogies. Strict implementation of speed limits on trains while passing through the forest areas will have to be implemented to reduce animal mortalities with coordinative of railway department regular meetings will held along with site inspection it necessary workshop for train staff and forest department will be organized.

Tadoba-Nawegaon-Nagzira corridor delineated by Wildlife Institute of India. Data is collected and analysis of data is under progress. Report of WII will be treated as part of this plan in future. **(Appendix–IV)**

CORRIDOR 4:

Tadoba-Andhari Tiger Reserve to Kanhargaon to Tipeshwar Wildlife Sanctuary Please see Map 4 accompanying this document and Compartment list for Corridor 4 (TT) for a list of the compartments comprising this corridor.

Bottleneck 1 (TT1): This is a bottleneck with a width of 2 km between compartment no. D-447, Manora Beat, Ballarshah Range, Central Chanda Division.

Bottleneck 2 (TT2): This is a bottleneck with a width of 800 meters between compartment 367 of Chandrapur Buffer Range (Beat Haldi) and Compartment No. 519, Walni Beat, Chichpalli Range, Division Chandrapur. The Chandrapur-Mul Highway and the National Highway 7 pass through this corridor.

NH-7 separates Tipeshwar WLS from Patanbori Range and Pandharkawda Range of Pandharkawda Division in Maharashtra. One more area where the NH-7 bisects the TATR- Tipeshwar corridor is in the Telangana section area and is scheduled for expansion into a 4/6 lane expressway and appropriate mitigation measures need to be put in place in consultation with the SBWL, NBWL and NHAI.

Bottleneck 3 (TT3): Most of the areas falling within Wirur Range and Wansadi Range of Central Chanda division are along a narrow ridgeline and at some places as thin as 1 km.

In the area joining the Central Chanda Division and the FDCM compartments under the proposed Kanhargaon WLS, there is a state highway with very heavy traffic passing from Ballarshah to Kothari to Gondpipri. Appropriate mitigation measures along this crucial linkage need to be put in place.

Gap / Disruptions:

Gap 1 (Gap TT4): The first disruption is between Wirur Range, Central Chanda Division and Dhaba Range and FDCM-Central Chanda Division, which falls under the proposed Kanhargaon WLS. Along the river Wardha, Rajura Range the area falling under the Central Chanda Division is completely isolated from the proposed Kanhargaon WLS due to human settlements and agricultural fields along the river.

Gap 2 (Gap TT5): This gap is between Tejapur Beat, Mukutban Range-Pandharkawda Division and Jambuldhara and Mandwa Beats, Wansadi Range-Central Chanda Division.

Gap 3 (Gap TT6): This gap is between Hirapur Beat, Mukutban Range-Pandharkawda Division and Durghadi and Rupapeth Beats, Wansadi Range-Central Chanda Division. There is a very narrow area under the Pandharkawda Division but shows tiger presence and therefore restoration plans in this area are crucial.

NOTE:

Additional data requirement for inter-state corridors. The corridor from TATR to Kawal Tiger Reserve (Telangana) and Indravati Tiger Reserve (Chhattisgarh) have been identified partially at compartment level, within the state boundaries of Maharashtra. Maps at compartment level for the areas falling within Telangana and Chhattisgarh will be needed so that delineation of corridors on their side can be done systematically. **(Appendix-V)**

CORRIDOR 5:

Tadoba-Indravati corridor as delineated by Wildlife Institute of India ground truthing is done by visiting all the villages in the corridors and GPS readings were taken and chart is prepared which is enclosed. **(Appendix-VI)** Village area is the bottleneck for dispersal of the tiger as almost all the villages fall in the corridor.

5.2 Prioritization of Linkages

After the study of Wildlife Institute of India linkages will be confirmed and in next plan prioritization can be possible. During this Plan period, wildlife management inputs will be provided for all the areas of Chandrapur district.

5.3 Development of integrated land use approach for the area commensurate with Tiger conservation and co existence agenda.

Most of the land is under Reserved and Protected forests. Some areas are also Unclassed Forests and some under Revenue Department as 'Khadak pahad' or 'Zudapi jungle'. The agriculture areas forming the part of broken corridor are of immense importance and the agricultural practices in these areas may have to be suitably modified to help movement of wild animals. Social Forestry Department can tackle other Govt. lands in this area.

5.4 Wild life management in forest areas of the territorial/ FDCM divisions.

The management of the forest of territorial divisions are done as per respective division's Working Plan and of FDCM divisions are done as per respective division's Management Plan.

Sr. No.	Name of Division	Working Plan/ Management Plan written by	Period
1	Bramhapuri (T)	Shri. T.K. Choube	2005-06 to 2014-15
2	Central Chandra (T)	Shri. R.S. Yadav & Shri. G.P. Garad	2004-05 to 2013-14
3	Chandrapur (T)	Dr. S.S. Shrivastava	2002-03 to 2011-12
4	West Chanda (FDCM)	Smt. Nina Khandekar	2006-07 to 2015-16
5	Central Chanda (FDCM)	Shri. G.S. Balki	2006-07 to 2015-16
6	Bramhapuri (FDCM)	Shri. H.N. Bhosle	2005-06 to 2014-15

The provisions for wild life management have been provided in each working Plan/ Management Plan under Wildlife (Overlapping) Working Circle as per National Working Plan code June 2004, issued by Ministry of Environment & Forests, New Delhi.

The general prescription given under Wildlife (Overlapping) Working Circle in the Working Plan/ Management Plan are as follows :-

- Creation of awareness among the young generation about the importance of wildlife with the help of school teachers.
- Motivating general people for conservation of wildlife.
- Listing of wild animals along with their local names found in the area of plan.
- Strict enforcement of Wildlife (Protection) Act-1972 and rewarding staff and informers for controlling wildlife offences.
- Villagers and Gram Panchayat will be motivated for Forest and Wildlife Protection.
- While preparing a treatment of a coupe for felling in any working circle potential habitat of wild animals and existing waterholes will be identified and marked on the treatment map.
- Marking of dead trees in any felling coupe will be done only if their number is more than 2 per hectare. These trees (snags) will be required for nesting and resting of the wild animals.

-
-
- During harvesting some unsound and hollow logs of commercially low utility not exceeding 3 per hectare will be left in the forest to serve as shelter for wild animals.
 - Suitable locations will be identified for construction of waterhole for wild animals.
 - The labour camps and transit depot will be established away from the areas having high density of wild animals.

5.5 Zone Plan Management Strategies (Forestry, Protection, Habitat Management)

The strategies proposed in this part of plan are briefly discussed in the following paragraphs. As mentioned earlier these will be in consonance with the prescriptions laid down in the Working Plan and if needed suitable modifications to be done.

5.5.1 Forestry:-

The forestry working in the adjoining area included in this plan will be as per working plan/ working scheme with following generic prescription to fine tune the forestry operation. An overarching safeguard should be provided for tree fellings/ thinings under various systems of silviculture as indicated below;

- Clear felling resulting in concentrated regeneration should be avoided.
- A high forest system with diffused regeneration (selection/ group selection etc.) or accessory system (improvement felling etc.) should be allowed.
- The status of regeneration should be used as an overarching condition for permitting tree felling. An area with unestablished regeneration should be avoided for concentrated fellings.
- The tree removal/ thinning can be permitted in a selective manner so that the canopy cover does not fall below 40% in winter months. However, if the marking prescribed earlier for the area resulted in lesser canopy opening, then the same should be adopted.
- The timber exploitation activities in coups should be staggered.
- The plantation activity should be staggered to safeguard from induced edge effect, especially near human settlements.
- Only species indigenous to the area should be taken up for plantation.

5.5.2 Protection:-

This is the most important activity as the existing wildlife and their habitat needs to be protected for posterity. Various factors influence the protection activities and under the changed conditions it is one of the most challenging tasks. The various measures suggested in this regard are as under:-

5.5.2(a) Check Naka:-

The large patches of forest land are traversed by cart roads constructed for various purposes e.g. for coupe working, plantation activities etc. These roads are easy portal of entry for poachers. Hence, entry into such forest areas with Tiger population needs to be controlled by erecting check *naka* and putting up a barrier. One check naka will be manned by 3 van majoors who will be doing their duties by rotation. The list of proposed check *nakas* is appended at **Appendix-VII**.

5.5.2(b) Protection Hut :-

Some of the forest areas are situated far off from human habitation. There is no camping facility in such remote areas. Sites have been identified where camping of forest staff will help in according better protection to forests & wildlife. The continuous presence of patrolling party at Protection Hut has a deterrent effect on poachers. This concept has been in practice in many Protected Areas including Tiger Reserves and has given very good results. The list of proposed protection huts is appended at **Appendix-VIII**.

5.5.2(c) Watch Tower:-

Watch towers are required to be constructed so that areas can be better protected from fire during summer. The vision from elevated platforms will provide view of large areas and earlier detection of fire will help in taking quick remedial actions. The watch towers can also be useful for observing the activities of wild animals. The list of proposed watch tower is appended at **Appendix-IX**.

5.5.2(d) Wireless Maintenance :-

The wireless facility already exists in Chandrapur division, Bramhapuri division, West Chanda FDCM division, Central Chanda FDCM division and Bramhapuri FDCM division, it needs to be strengthened. The efforts are on to install wireless facility in Central Chanda Forest Division. Many of the forest areas do not

have coverage of mobile phones, hence, wireless communication plays important role in wildlife protection in remote areas. Hence, adequate funds need to be made available for maintenance of the wireless network.

5.5.2(e) Hiring of vehicles :-

At present the vehicles have been provided to the officers of the level of Assistant Conservator of Forests only. Main protection measures are being implemented at Range level. The task is most challenging during 6 months from January to June. This is the season when the water level in various water holes starts receding and in the later part of summer it is limited to a very few water holes. As these water holes are frequented by the wild animals, better protection from poaching needs to be provided. Further, this being fire season, movement of forest staff helps in controlling the fire in a better way.

Hence, it is proposed to provide one vehicle to each Range. In initial years the vehicle will be hired for six months. During this plan period purchase of new four wheel vehicle will be done in phased manner.

5.5.2(f) Appointment of Temporary Labourers:-

The regular staff is engaged in various activities besides protection, such as plantation, exploitations, sales, tendu collection, constructions etc. Hence, in order to provide better protection to forest areas particularly during fire season, deployment of additional labourers is proposed. They will help in monitoring works, fire protection, 24 hours vigilance at water holes, tracking of important animals like Tigers etc. It is proposed to appoint a team of 20 labourers per Range for 6 months.

5.5.3 Habitat Management and restoration:-

The present habitat though good needs to be improved as much as possible. By better protection measures the shelter or cover will automatically improve. The other two important factors in Habitat Improvement are making available sufficient quantity of fodder and water. Following activities have been proposed in this respect :-

5.5.3.1 WATER AUGMENTATION:-

5.5.3.1(a) Deepening/ desilting of existing water holes :-

A survey of existing water hole should be done. All the existing water holes should be deepened/ desilted every 5 years depending on site eligibility, while deepening/desilting the approaches should be made proper so that wild animal can access the water hole. The work of deepening/desilting should be done just before rains. The list of existing water holes is enclosed at **Appendix-X**.

5.5.3.1(b) Creation of new water holes :-

New water holes should be created in the form of *nala plugs*, dug out ponds or small forest tanks. Site selected for new water holes should be deep inside the forest, where domestic cattle should not reach. The site should be selected on the basis of one water hole in 2.5 Sq.km. area.

5.5.3.1(c) Construction of temporary earthen bunds:-

Some *nalas* in the forest flow perennially but some *nalas* stops flowing after December/January. Small earthen bunds should be constructed across the *nalas* after December/January at suitable site where impermissible strata exist. These earthen structures should be constructed every year in the month of December/January before *nalas* stops flowing.

5.5.3.2 Meadow Development:-

It is very difficult to develop the meadow for wild herbivores and keep it free from grazing of cattle in the non protected area forest. But the meadow/grass lands are very essential constituent of habitat especially for animals like Spotted deers. Though the grass in plantations where grazing of cattle is prohibited serves as meadow, it is necessary to develop some grass land at secluded place deep inside the forest. The work can consist of selection of site with minimum number of trees, shrubs and good soil depth. The area should be well demarcated. All grasses e.g. Bhurbhusi grass, Broomgrass, Tarota, Parthenium, Bhutganja should be uprooted. All tree growth except fruit tree, browsable species tree and few big trees for shadow should be removed. The areas should be controlled burnt in month of December /January. The area without grasses should be ploughed and local grass species like Sheda, Pawanya should be broadcasted at the beginning of Monsoon. At least 5 ha of such area should be selected every year in each range.

5.5.4 Purchase of Equipments :-

For effective wildlife management the field units should be well equipped. Hence, they need to be provided with gadgets which are useful in day to day monitoring (e.g.GPS) or those required in case of eventuality (e.g. post mortem kit)

5.5.4(a) Purchase of Tranquilizing equipments :-

The adjoining area is prone to man animal conflict. Many times Tiger/ Panther sneak in to the village area and capturing the animal become necessary every time it is not possible to capture the animal in cages, so each division of adjoining area needs to possess tranquilizing gun with accessories and drugs. Purchase of tranquilizing gun at least one per division is provided in the plan. Purchase of drugs every year is also provided in the plan.

5.5.4(b) GPS :-

This instrument is useful for daily monitoring of wildlife. The exact location of any event or sighting of wildlife can be recorded with this. Each Forest Guard needs to be provided with GPS. It is proposed to procure GPS for all beat guards during the plan period.

5.5.4(c) Camera Traps:-

These are useful for confirming the presence of wildlife as well as identification of particular animal and helps in monitoring works in a big way. It is proposed to implement NTCA phase-IV monitoring protocol in the adjoining area once in a year, so purchase of required camera traps are proposed.

5.5.4(d) Post-mortem Kits :-

In case of reported death of wild animal, post mortem has to be conducted at the earliest to ascertain the actual cause of death. Many a time, the veterinary doctor has to be taken to the site at odd hours or holidays. The post-mortem kit available with Department comes in handy under such conditions which save lot of time in going to the Veterinary units only for getting the kit. It is proposed to equip each Range office with this kit.

5.5.4(e) Purchase of cages :-

The adjoining area is prone to man animal conflict. Many times Tiger/ Panther/ Sloth bear sneak in to the village area and capturing the animal become necessary, so each division of adjoining area needs to possess a set of trap cage, transport cage and treatment cage the purchase of one set for each division is provided in the plan.

5.5.5 Training & Awareness Generation:-

Capacity building of the staff members plays important role in overall efficient management of any activity. Wildlife management is a specialized job and hence the staff needs to be imparted training in various aspects. The training in use of GPS/PDA, anti-poaching operations, wildlife crime, habitat enrichment techniques, eco-development initiatives and legal issues and tranquilizing needs to be imparted to grass root level staff. It is also desirable to arrange study/exposure tours of wildlife protected areas for the appraisal of good practices in that area.

At the same time, there is a need to increase the level of awareness about wildlife conservation amongst the people in general and those living in the vicinity of forest area in particular. The rise in man-wild animal conflict is a very sensitive issue and needs to be tackled very carefully. The members of all JFM Committees need to be sensitized on priority. For that, trainings, exposure visits, workshops need to be organized on regular basis. Once the rapport is developed between the field staff and villagers, the burden on the staff will be lowered considerably.

CHAPTER – 6

ECO DEVELOPMENT AND LIVELIHOODS

6.1 Constitution of Conservation Area Management Committee

To facilitate coordination and main streaming of biodiversity concern the JFM committees already existing at range level, division level and district level will be used for this purpose.

6.2 Formation of Eco development Committees and supporting institutional frameworks

As the adjoining area does not fall within category of wildlife protected area constitution of Eco Development Committees will not be possible. Existing JFM committees can be entrusted with the work of EDC's.

6.3 Livelihood Support Initiatives through village Micro plans.

- Village level micro plans already prepared for JFMC's can be suitably modified to incorporate activities of EDC's. This should include training for creation of value-added products of Bamboos and other local material viz. handicraft articles etc. So that more employment can be generated.
- Now a days man animal conflict issues has become sensitive as there is increase in Human injuries and deaths due to wild animals, livestock depredation by carnivores, crop depredation by wild ungulates. It is essential to provide timely compensation to the people who are put to loss. Even providing solar power fencing to field of villagers can be thought of.
- To minimize the dependence of villagers on the forest, some measures like supply of LPG connections, solar light panels, and improved *chullas* will be taken up.

6.4 Monitoring and Evaluation

Monitoring and evaluation of the activity is an important part of any plan for further improvement. The monitoring can be physical and qualitative. The monitoring and evaluation of the work carried out will be done by concerned Dy.CF/D.M. and should be reviewed by CCF (T)/G.M. (FDCM).

CHAPTER 7

TIGER POPULATION AND HABITAT ASSESSMENT

7.1 Day to Day Monitoring Protocol

It is difficult to report the happenings in the area on daily basis like protected area as the territorial staff has multifarious activities to be done. The territorial staff, however, can report daily happenings about wildlife like sighting of Tigers or kill and wildlife offences to respective divisions through concerned Range Forest Officers. These matters should also be written by the field staff in their day to day diaries submitted regularly to their concerned superiors.

7.2 Tiger Population Estimation Framework (Phase IV Protocol):-

Presently there is no regular population estimation of animals done by the territorial divisions. Even during the population estimation exercise done by Wildlife Institute of India (WLII), Dehra Dun the Tiger beats could not be identified though there is presence of Tigers in many areas. This estimation exercise will be done annually as Phase-IV monitoring protocol given by the NTCA and Wildlife Institute of India in 2012. The provision for purchase of camera trap and batteries are made in the plan.

7.3 Analysis and Reporting Framework and Periodicity.

The population estimation will be done annually and analyzed as per guidelines. It will be reported to Principal Chief Conservator of Forests (Wildlife) M.S. through concerned Chief Conservator of Forests (Territorial) and General Manager (FDCM).

CHAPTER 8

ORGANIZATION, ADMINISTRATION AND BUDGET

8.1 Eco Development Committee Coordination:-

Eco development committee will report their suggestion/ recommendation through concerned R.F.O. to Dy. Conservator of Forests/Divisional Manager who will further submit the plan of activity and requirements of funds etc. to Chief Conservator Forests (Territorial)/ General Manger (FDCM) for sanction.

8.2 Staff deployment, Protection strategy and Linkages with Tiger cell and Buffer Zone:-

Field staff viz., R.F.Os, Foresters, Forest Guards, will work for the implementation of the Plan. Protection and habitat improvement works will be carried out by them.

At district level there are regular meetings of Tiger Cell. Remarkable happenings in the forest areas about poaching/ protection related issues can be taken up in Tiger Cell meetings. This will help in generating grass root level police support for the protection squads.

8.3 Schedule of Operations:-

The schedule of operations will be decided by the concerned Dy. Conservator of forest/ Divisional Manager considering availability of funds in consultation with respective Chief Conservator Forests (Territorial)/ General Manger (FDCM).

8.4 Source of Funding:-

The funds for salary of staff, general administration and protection, plantation, production works will be continued to receive from general state plan/non plan, District Development Scheme etc.

The funds for Special Works of Wildlife Management and Special Protection will be made available from NTCA (NTCA has made available Rs. 54.166 lakh for adjoining area during 2012-13 through F.D. TATR), MoEF Government of India

Scheme of Integrated Wildlife Management outside Protected Areas, CAMPA, Finance Commission etc. An Annual Plan of Operation (APO) for NTCA funds will be prepared in the month of February every year and submitted to NTCA through Field Director TATR. An Annual Plan of Operation for seeking funds from MoEF should also be prepared separately and submitted through Chief Conservator of Forest (T) and General Manager FDCM Ltd. The other work of wildlife conservation not covered under preceding two funding sources should be incorporated in their routine Annual Plan of Operation for CAMPA, Finance Commission, District Plan, State Plans etc.

8.5 Activity Budget:-

The budget for activities proposed in the plan is prepared on the basis of current rates. While preparing Annual Plan of Operation the rates of that year should be adopted. The activity budget is enclosed at **Appendix–XI**.

APPENDIX – I

STATEMENT SHOWING MAJOR WILD ANIMALS

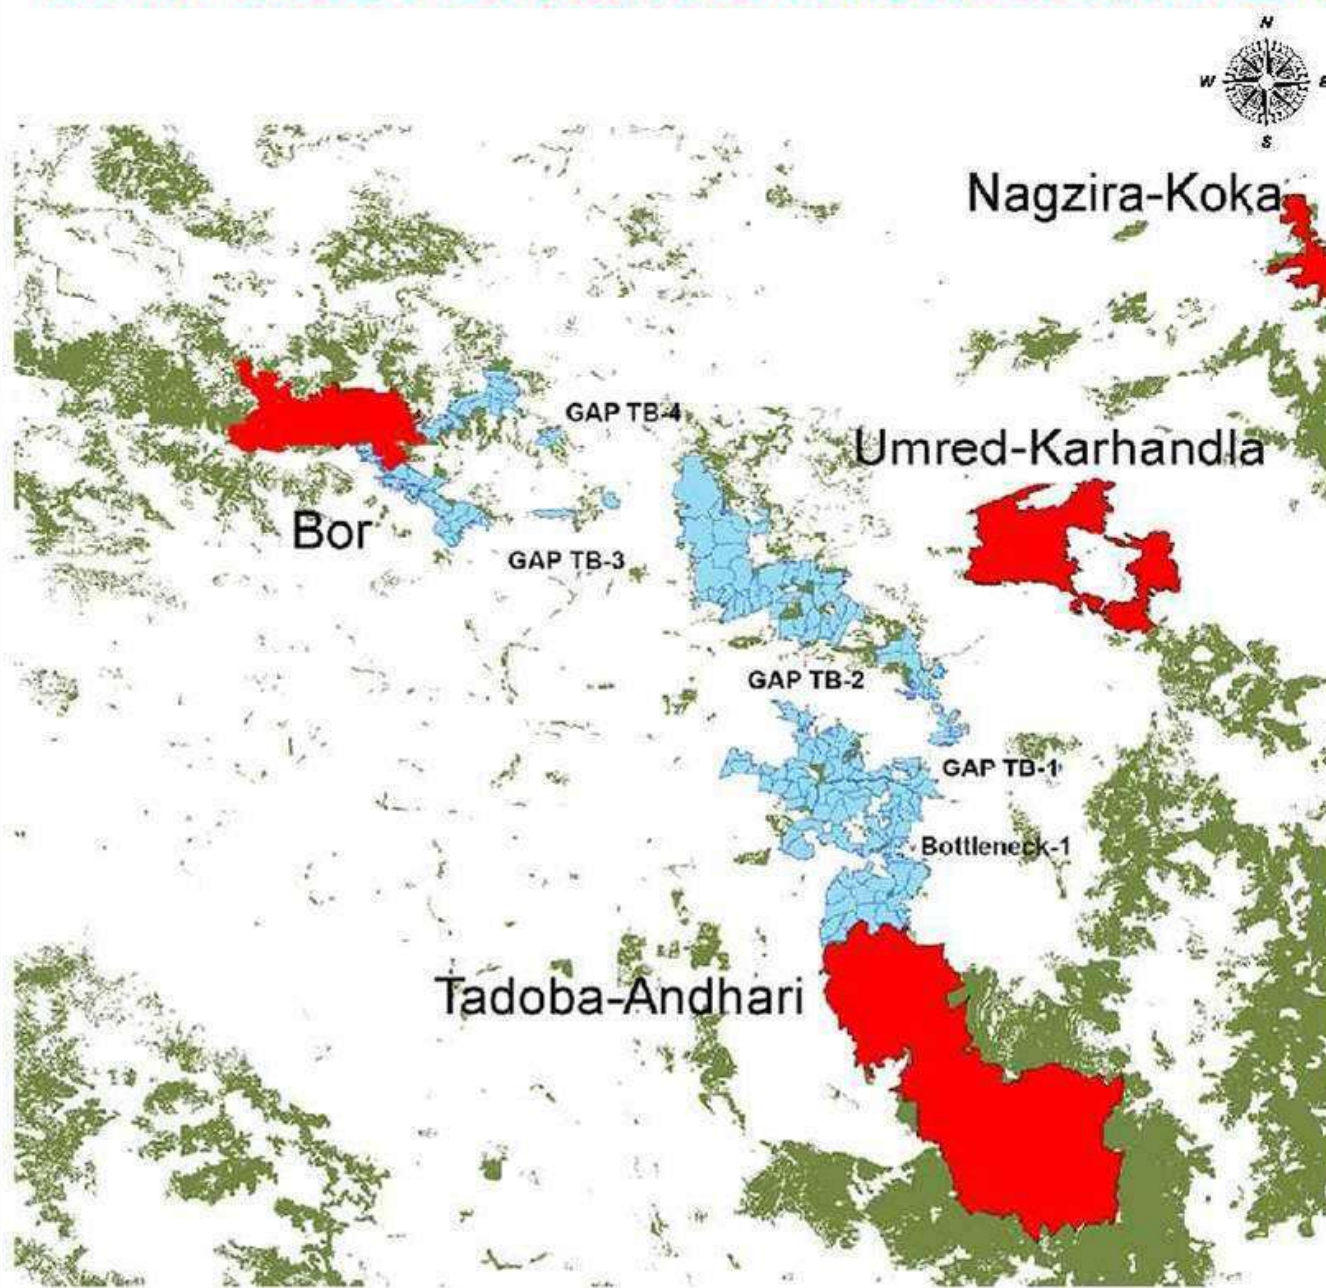

AS PER THE LAST CENSUS (2011)

(Para No. 1.11)
